Applied Mathematics and Computer Science student graduating December 2027, seeking a Summer 2027 software engineering or data internship. Co-founder and technical lead of a content automation company, building production Python backends, data pipelines, and LLM tooling.

EDUCATION

University of Wisconsin–Stout — Menomonie, WI

B.S. Applied Mathematics and Computer Science, Concentration in Artificial Intelligence Integration | Expected December 2027

GPA: 3.40

Relevant coursework: Data Structures, Algorithms, Database Systems, Linear Algebra, Statistics, Discrete Mathematics, Mathematical Modeling, Introduction to Artificial Intelligence

EXPERIENCE

Co-Founder & Technical Lead — View LLC

Remote | September 2025 – Present

- Built ContentStudio, a FastAPI backend that consolidates seven internal content tools behind a single conversational planning layer, cutting a client content batch from several hours of manual work to minutes; running in production for client work.
- Architected a hybrid model-routing layer that runs planning and orchestration on a locally hosted Llama 3.1 model while reserving frontier-tier models for generation and vision, logging every turn to build a fine-tuning dataset.
- Built a Google Maps scraping and enrichment pipeline that produced 100+ qualified local-business prospects in a single run, enriching each with public web and social data to derive content strategy automatically.
- Developed an automated video pipeline using Whisper, ffmpeg, and OpenCV that turns a 20-minute recording into roughly 20 reframed vertical clips, replacing manual transcription, cutting, and framing.
- Own error handling, monitoring, and recovery across all pipelines, including keeping them running as third-party APIs and page structures change.

Shipping & Receiving Associate — Volvo of Lisle

Lisle, IL | August 2022 – Present

- Trusted as a teenager to lead the parts department's move into a new building: designed the bin-location scheme, mapped all ~2,000 SKUs to new locations, and loaded the data into Reynolds & Reynolds.
- Enabled the department's first physical inventory counts, recovering roughly \$18K in surplus inventory value across two years (\$10K in 2026, \$8K in 2025).
- Onboarded the new hire replacing my former supervisor, covering receiving procedures and the new warehouse layout.
- Manage receiving, inventory, and shipping for the dealership parts department.

PROJECTS

Sharecard — Direct Mail Platform (2026)

- Built a Next.js and Supabase application for designing and sending postcard campaigns to local audiences, deployed on Vercel.
- Ran a full security audit of the application and worked a prioritized remediation plan through to completion.

Flip Finder — Arbitrage Lead Tool

- Built a browser-automation tool that scanned retail listings for resale arbitrage opportunities, pairing Patchright for navigation with a locally hosted vision model to read product pages without relying on brittle selectors.
- Paused development after anti-automation defenses required infrastructure beyond the project's budget; documented the findings and the conditions under which it would be viable.

Amazon FBA Storefront (2024 – 2025)

- Launched and operated a storefront end to end, generating roughly \$1,500 in revenue across ~30 units sold; wound it down after concluding the margins were too thin to scale.

SKILLS

Languages: Python, TypeScript, JavaScript, SQL, HTML/CSS; familiar with Java, C++, R

Frameworks & Tools: FastAPI, Next.js/React, PostgreSQL, Supabase, Docker, Git, REST APIs, Whisper, ffmpeg, OpenCV

Concepts: Data pipelines, LLM integration and orchestration, API design, web scraping, relational database design

LEADERSHIP

Assistant Coach, UW–Stout Women's Soccer (2026 season) — coach a varsity NCAA program alongside a full course load and running a business.

Goalkeeper, UW–Stout Men's Soccer (two seasons) — competed collegiately while maintaining academic standing.
